

*You know there's a*

**SMART KID INSIDE,**

*just trying to get out.*

We train the skills the brain uses to think and learn.

We call it brain training.  
Parents and kids call it life changing.

# LEARNING ISSUES?

*Are you stuck in a cycle of frustration?*

## SUCCESS STORIES

Is brain training right for you?

Read stories from some of the families we've helped at: [learningrx.com/reviews](https://learningrx.com/reviews)

## SHOULD YOU HIRE A TUTOR OR A BRAIN TRAINER?

Tutoring reteaches information that wasn't grasped the first time.

Brain training works on the skills the brain uses to learn from now on.

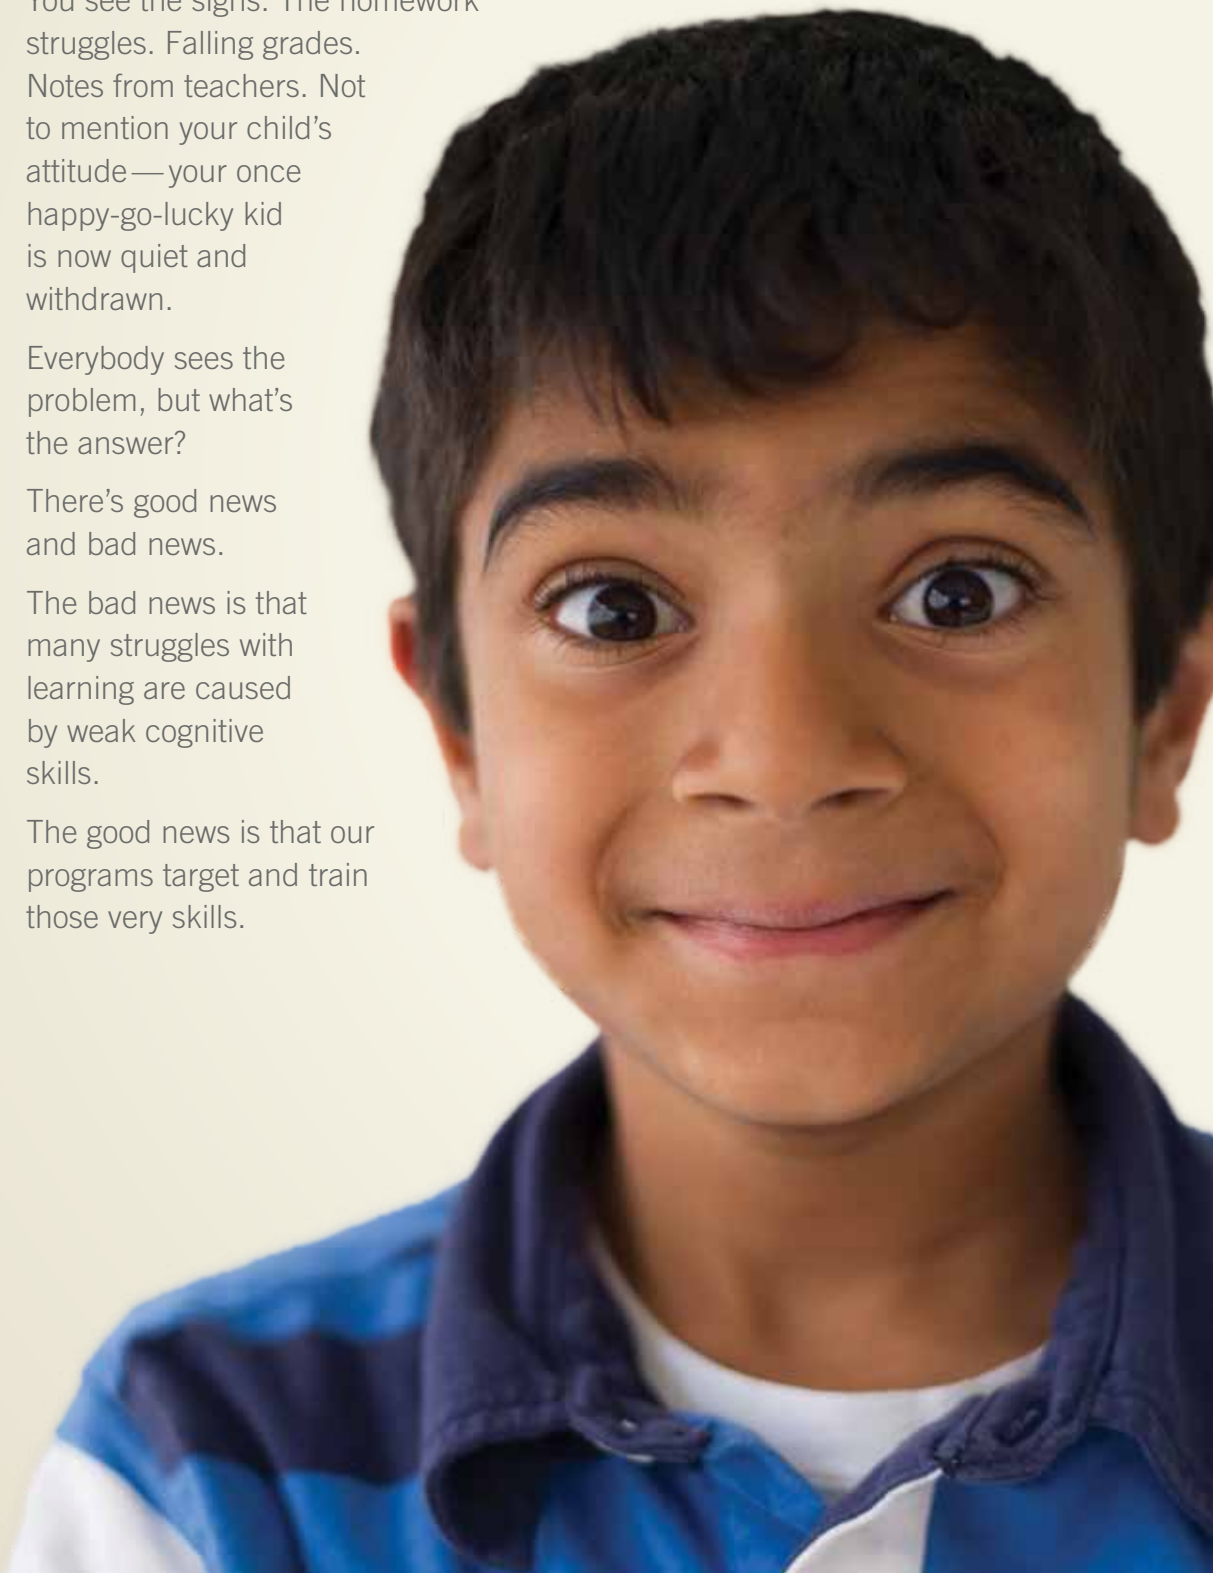

You see the signs. The homework struggles. Falling grades. Notes from teachers. Not to mention your child's attitude—your once happy-go-lucky kid is now quiet and withdrawn.

Everybody sees the problem, but what's the answer?

There's good news and bad news.

The bad news is that many struggles with learning are caused by weak cognitive skills.

The good news is that our programs target and train those very skills.

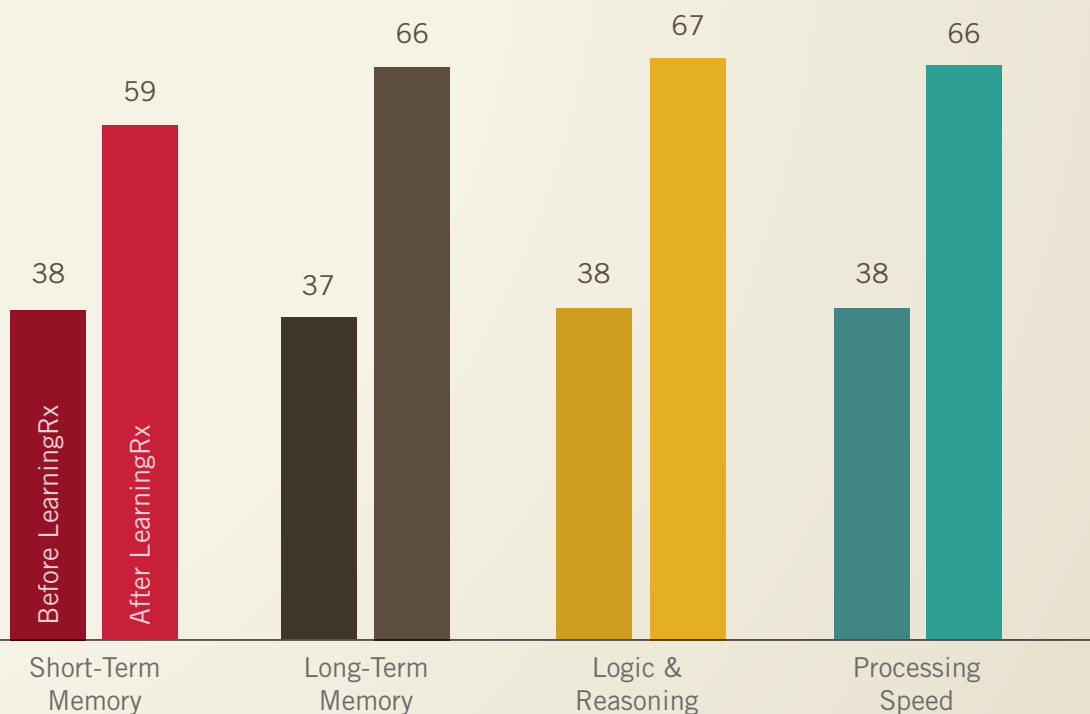

## WORKING OUT MAKES MUSCLES STRONGER. BRAINS, TOO.

Our programs are unique in that students work face-to-face with personal brain trainers, doing fun, challenging mental exercises that work on the very skills the brain uses to think and learn. Compare it to working out at the gym with a personal fitness trainer who customizes your workouts, holds you accountable, and encourages you beyond your comfort zone. That's exactly what our trainers do, except we're training the brain, not the body.

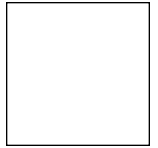

### LEARNINGRX BRAIN TRAINING: 35 YEARS IN THE MAKING

LearningRx is the result of years of intensive research and thousands of successfully trained students. Plus, we do before-and-after testing so we can measure the changes. Here's how it works:

- 1** Call and schedule a Cognitive Skills Assessment. This test takes about an hour. It's the first step because it allows us to figure out if weak cognitive skills are making life for your child harder than it needs to be.
- 2** Begin brain training. We identified cognitive weaknesses with the assessment, now we target and train those skills. Your child will work one-on-one with a trainer doing mental exercises that are challenging and fun.
- 3** Take the final assessment. After training is complete, we measure changes in your child's cognitive performance.

*This chart shows, in percentile points, the average improvements in clients with moderate cognitive weaknesses. These numbers are based on the average pre- and post-test results of thousands of clients, without a control group. You may see more, less or no improvement in these cognitive skills following your program. For all our results, visit: [www.learningrx.com/results](http://www.learningrx.com/results).*

Colorado Springs North
